

JND_P vs IHD

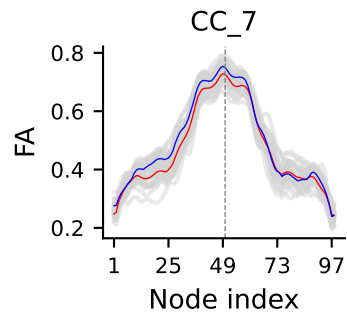

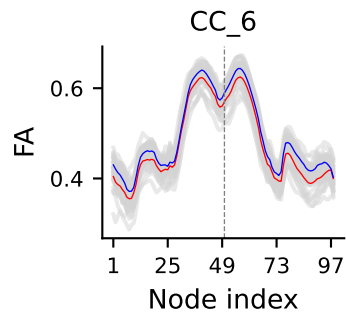

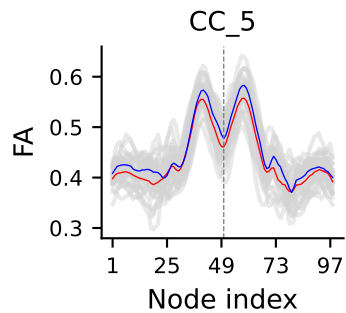

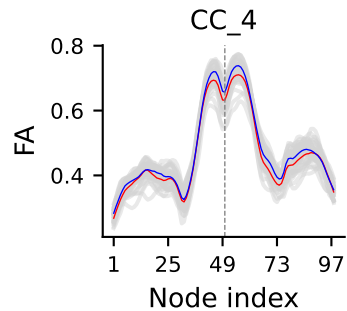

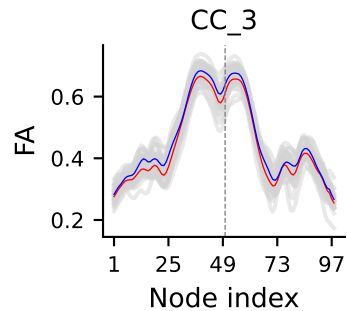

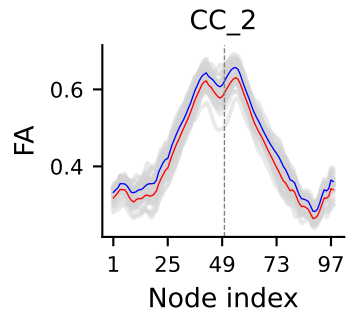

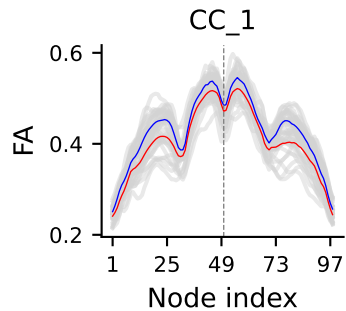

JND_P vs IHD

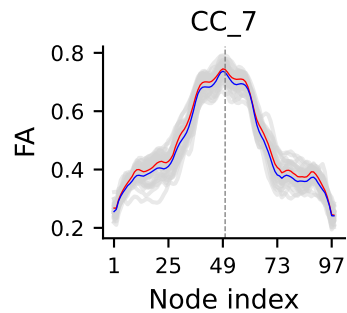

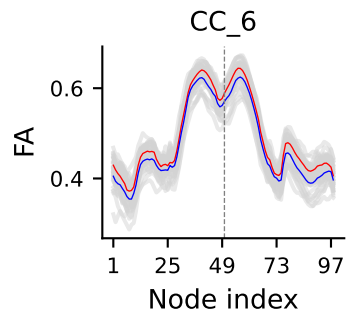

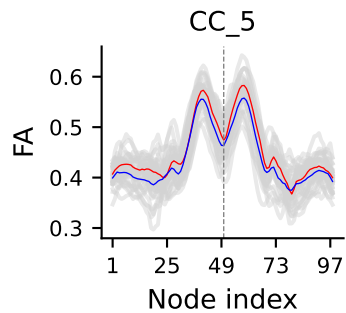

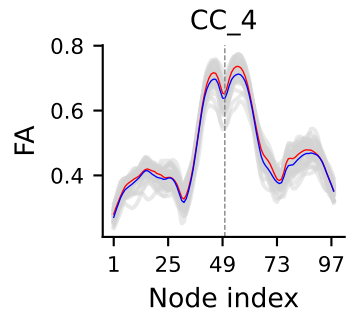

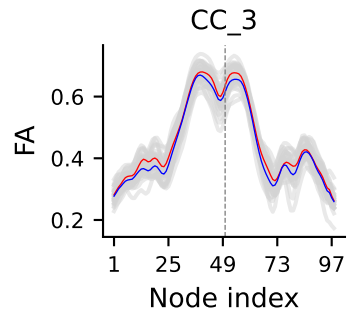

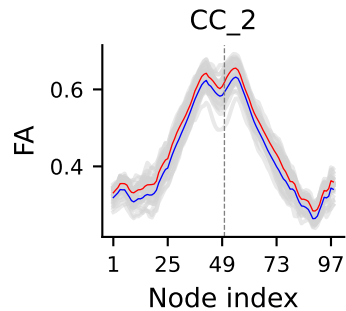

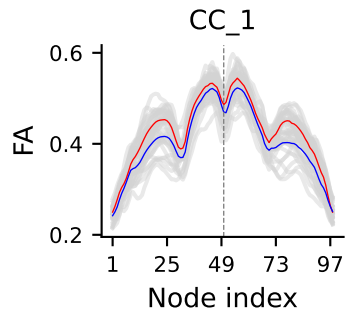

Old
Young

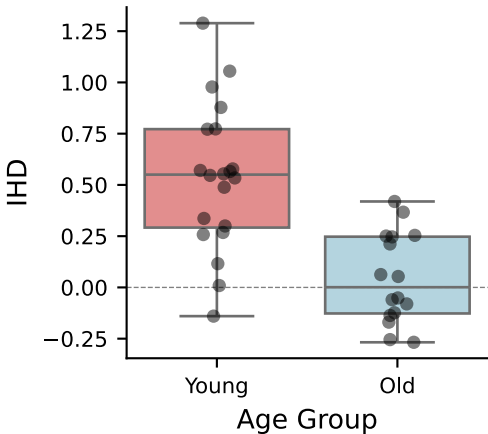

— High JND
— Low JND

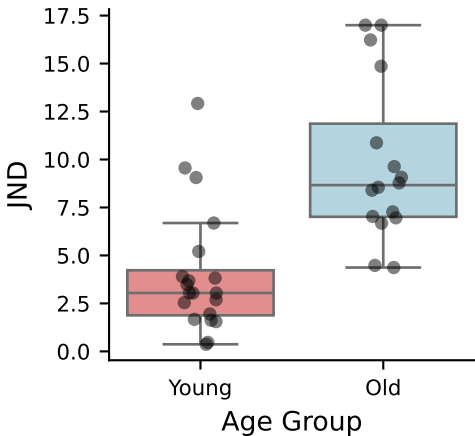

— High IHD
— Low IHD

A box plot comparing the distribution of a variable between two age groups: Young and Old. The Y-axis represents the variable's value, ranging from -0.25 to 1.25 with increments of 0.25. A dashed horizontal line is drawn at Y=0.00. The Young group is represented by a red box, and the Old group is represented by a blue box. Individual data points are overlaid on the boxes. The Young group shows a higher median and greater spread than the Old group.

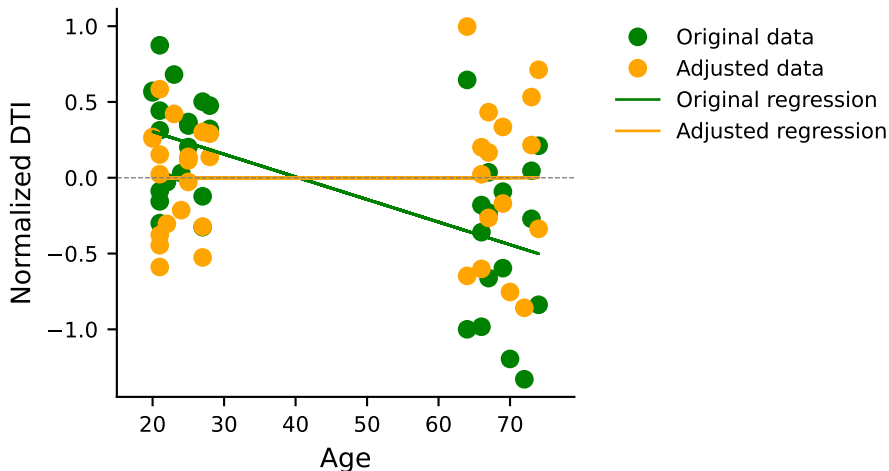

Age Group	Min	Q1	Median	Q3	Max
Young	-0.15	0.30	0.55	0.78	1.28
Old	-0.25	-0.10	0.00	0.25	0.45

JND by Age Group

Age vs DTI mean across segments (CC5)

Original : p-value = 0.000, F-stat = 21.12

Adjusted : p-value = 1.000, F-stat = 0.00

Age Group Comparison of DTI (CC5)
